Dr. Joshua Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

Dear Josh:

You may remember my warning to you that I would come to you requesting some assistance in setting up experiments for the Microbial Genetics course which we are offering here, and the present letter has this as its purpose. I should deeply appreciate it if you would send to me K-12 stocks which can be employed in recombination experiments. In addition I would like to include your replicate plating method as an exercise. In connection with the latter, could you send me sufficient information so that I can set the thing up and try it out here.

With kindest personal regards and many thanks, I am

Sincerely yours,

Sol
